Hands-On Lean Training in Pull Planning

Pull Planning is a typical first step in lean implementation on AEC projects in which project team members determine how work is handed off between companies and individuals to deliver milestones.

Join Master’s students from WIT’s “Modern Construction Delivery Methods” class and fellow AEC professionals to practice Pull Planning in a fast-paced, high-energy setting! Those with more experience – try your hand at facilitating a Pull Plan with LCI New England Community of Practice members standing by to assist.

In this workshop, you will learn how to (1) make handoffs explicit between workers, (2) experiment with sequencing alternatives, and (3) consider different rhythms for production.
